AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of this application.

Listing of Claims:

1. (Currently amended) A method for retrieving data for use in an interactive television application system having an interactive television application implemented at least partially on user television equipment, in which non-on-demand media data is provided by a non-on-demand media data source and on-demand media data is provided by an on-demand media data source, and wherein the non-on-demand and on-demand media data sources are separate, comprising:

retrieving the non-on-demand media data from the non-on-demand media data source;

automatically establishing a client-server connection between the interactive television application system and the on-demand media data source;

automatically retrieving the on-demand media data from the on-demand media data source;

automatically caching the on-demand media data in cache on the user television equipment;

displaying the on-demand media data from the cache of the user television equipment in response to a user indication to access at least the on-demand media data; and

displaying the non-on-demand media data in response to a user indication to access at least the non-on-demand data.

- 2. (Original) The method of claim 1, wherein the non-on-demand media data retrieved is television program listings data.
- 3. (Original) The method of claim 1, wherein the on-demand media data retrieved is genre data.
- 4. (Original) The method of claim 1, wherein the on-demand media data retrieved is interactive television application software data.
- 5. (Original) The method of claim 1, wherein the on-demand media data retrieved is video-on-demand listings data.
- 6. (Original) The method of claim 1, wherein the on-demand media data retrieved is audio-on-demand listings data.
- 7. (Original) The method of claim 1, wherein the on-demand media data retrieved is interactive video game listings data.
- 8. (Original) The method of claim 1, wherein the on-demand media data retrieved is weather data.
- 9. (Original) The method of claim 1, wherein the on-demand media data retrieved is sports statistics data.
- 10. (Original) The method of claim 1, wherein the on-demand media data retrieved is stock market data.

- 11. (Original) The method of claim 1, further comprising providing metadata contemporaneously with non-on-demand media data.
- 12. (Original) The method of claim 1, further comprising providing metadata contemporaneously with on-demand media data.
- 13. (Original) The method of claim 1, further comprising retrieving on-demand media data from the on-demand media data source in response to a user selection of an on-demand media listing.
- 14. (Currently amended) The method of claim 1, further comprising determining if the on-demand media data is cached on the user television equipment.
- 15. (Original) The method of claim 1, further comprising determining if on-demand media data needs to be retrieved from the on-demand media data source.
- 16. (Original) The method of claim 1, further comprising determining whether a connection exists between the interactive television application system and the on-demand media data source.

17. (Cancelled)

18. (Original) The method of claim 1, further comprising retrieving on-demand media data from multiple on-demand media data sources.

- 19. (Original) The method of claim 1, further comprising caching on-demand media data from multiple on-demand media data sources.
- 20. (Original) The method of claim 1, further comprising displaying non-on-demand media data and on-demand media data concurrently.
- 21. (Currently Amended) Computer-readable media for retrieving data for use in an interactive television application system having an interactive television application implemented at least partially on user television equipment, in which non-on-demand media data is provided by a non-on-demand media data source and on-demand media data is provided by a on-demand media data source, and wherein the on-demand and non-on-demand media data sources are separate, where the computer-readable media is encoded with machine-readable instructions for performing the method comprising:

retrieving the non-on-demand media data from the non-on-demand media data source;

automatically establishing a client-server connection between the interactive television application system and the on-demand media data source;

automatically retrieving the on-demand media data from the on-demand media data source;

automatically caching the on-demand media data in cache on the user television equipment;

displaying the on-demand media data from the cache of the user television equipment in response to a user indication to access at least the on-demand media data; and

displaying the non-on-demand media data in response to a user indication to access at least the non-on-demand data.

- 22. (Original) The computer-readable media of claim 21, wherein the non-on-demand media data retrieved is television program listings data.
- 23. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is genre data.
- 24. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is interactive television application software data.
- 25. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is video-on-demand listings data.
- 26. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is audio-on-demand listings data.
- 27. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is interactive video game listings data.
- 28. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is weather data.

- 29. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is sports statistics data.
- 30. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is stock market data.
- 31. (Currently amended) The computer-readable media of claim 21, <u>further comprising</u> the computer-readable media <u>further encoded with machine-readable instructions for</u> providing metadata contemporaneously with the non-on-demand media data.
- 32. (Currently amended) The computer-readable media of claim 21, further comprising the computer-readable media further encoded with machine-readable instructions for providing metadata contemporaneously with the on-demand media data.
- 33. (Currently amended) The computer-readable media of claim 21, further comprising the computer-readable media further encoded with machine-readable instructions for retrieving on-demand media data from the on-demand media data source in response to a user selection of an on-demand media listing.
- 34. (Currently amended) The computer-readable media of claim 21, further comprising the computer-readable media further encoded with machine-readable instructions for determining if the on-demand media data is cached on the user television equipment.

- 35. (Currently amended) The computer-readable media of claim 21, further comprising the computer-readable media further encoded with machine-readable instructions for determining if on-demand media data needs to be retrieved from the on-demand media data source.
- 36. (Currently amended) The computer-readable media of claim 21, further comprising the computer-readable media further encoded with machine-readable instructions for determining whether a connection exists between the interactive television application system and the on-demand media data source.
 - 37. (Cancelled).
- 38. (Currently amended) The computer-readable media of claim 21, further comprising the computer-readable media further encoded with machine-readable instructions for retrieving on-demand media data from multiple on-demand media data sources.
- 39. (Currently amended) The computer-readable media of claim 21, further comprising the computer-readable media further encoded with machine-readable instructions for caching on-demand media data from multiple on-demand media data sources.
- 40. (Currently amended) The computer-readable media of claim 21, <u>further comprising</u> the computer-readable media further encoded with machine-readable instructions for

displaying non-on-demand media data and on-demand media data concurrently.

- 41. (Currently amended) A system for retrieving data for use in an interactive television application system having an interactive television application implemented at least partially on user television equipment, in which non-on-demand media data is provided by a non-on-demand media data source and on-demand media data is provided by a on-demand media data source, and wherein the on-demand and the non-on-demand media data sources are separate, comprising:
- [[a]] means for retrieving the non-on-demand media data from the non-on-demand media data source;

means for automatically establishing a clientserver connection between the interactive television application system and the on-demand media data source

- [[a]] means for automatically retrieving the on-demand media data from the on-demand media data source;
- [[a]] means for automatically caching the ondemand media data in cache on the user television equipment;
- [[a]] means for displaying the on-demand media data from the cache of the user television equipment in response to a user indication to access at least the on-demand-media data; and
- [[a]] means for displaying the non-on-demand media data in response to a user indication to access at least the non-on-demand data.
- 42. (Original) The system of claim 41, wherein the non-on-demand media data retrieved is television program listings data.

- 43. (Original) The system of claim 41, wherein the on-demand media data retrieved is genre data.
- 44. (Original) The system of claim 41, wherein the on-demand media data retrieved is interactive television application software data.
- 45. (Original) The system of claim 41, wherein the on-demand media data retrieved is video-on-demand listings data.
- 46. (Original) The system of claim 41, wherein the on-demand media data retrieved is audio-on-demand listings data.
- 47. (Original) The system of claim 41, wherein the on-demand media data retrieved is interactive video game listings data.
- 48. (Original) The system of claim 41, wherein the on-demand media data retrieved is weather data.
- 49. (Original) The system of claim 41, wherein the on-demand media data retrieved is sports statistics data.
- 50. (Original) The system of claim 41, wherein the on-demand media data retrieved is stock market data.
- 51. (Currently amended) The system of claim 41, further comprising [[a]] means providing metadata contemporaneously with non-on-demand media data.

- 52. (Currently amended) The system of claim 41, further comprising [[a]] means for providing metadata contemporaneously with on-demand media data.
- 53. (Currently amended) The system of claim 41, further comprising [[a]] means for retrieving on-demand media data from the on-demand media data source in response to a user selection of an on-demand media listing.
- 54. (Currently amended) The system of claim 41, further comprising [[a]] means for determining if the ondemand media data is cached on the user television equipment.
- 55. (Currently amended) The system of claim 41, further comprising [[a]] means for determining if on-demand media data needs to be retrieved from the on-demand media data source.
- 56. (Currently amended) The system of claim 41, further comprising [[a]] means for determining whether a connection exists between the interactive television application system and the on-demand media data source.
 - 57. (Cancelled).
- 58. (Currently amended) The system of claim 41, further comprising [[a]] means for retrieving on-demand media data from multiple on-demand media data sources.
- 59. (Currently amended) The system of claim 41, further comprising [[a]] means for caching on-demand media data from multiple on-demand media data sources.

- 60. (Currently amended) The system of claim 41, further comprising [[a]] means for displaying non-on-demand media data and on-demand media data concurrently.
- data for use in an interactive television application system having an interactive television application implemented at least partially on user television equipment, in which non-on-demand media data is provided by a non-on-demand media data source and on-demand media data is provided by an on-demand media data source, and wherein the non-on-demand and on-demand media data sources are separate, comprising:

a communications device for communicating with the on-demand media data source and non-on-demand media data source;

cache memory;

a display device;

a user input device;

control circuitry programmed to:

direct the communications device to retrieve the non-on-demand media data from the non-on-demand media data source;

automatically establish a client-server connection between the communications device and the on-demand media data source;

automatically direct the communications device to retrieve the on-demand media data from the on-demand media data source;

automatically cache the on-demand media data in the cache memory;

in response to receiving a user indication to access at least the on-demand media data from the user input device, direct the display device to display the on-demand media data cached in the cache memory; and

in response to receiving a user indication to access at least the non-on-demand media data from the user input device, direct the display device to display the non-on-demand media data.

- 62. (Original) The system of claim 61, wherein the non-on-demand media data retrieved is television program listings data.
- 63. (Original) The system of claim 61, wherein the on-demand media data retrieved is genre data.
- 64. (Original) The system of claim 61, wherein the on-demand media data retrieved is interactive television application software data.
- 65. (Original) The system of claim 61, wherein the on-demand media data retrieved is video-on-demand listings data.
- 66. (Original) The system of claim 61, wherein the on-demand media data retrieved is audio-on-demand listings data.
- 67. (Original) The system of claim 61, wherein the on-demand media data retrieved is interactive video game listings data.

- 68. (Original) The system of claim 61, wherein the on-demand media data retrieved is weather data.
- 69. (Original) The system of claim 61, wherein the on-demand media data retrieved is sports statistics data.
- 70. (Original) The system of claim 61, wherein the on-demand media data retrieved is stock market data.
- 71. (Original) The system of claim 61, wherein metadata is contemporaneously retrieved along with the non-on-demand media data.
- 72. (Original) The system of claim 61, wherein metadata is contemporaneously retrieved with the on-demand media data.
- 73. (Currently amended) The system of claim 61, wherein the control circuitry is directed to determine if the on-demand media data is cached in the cache memory of the user television equipment.
- 74. (Original) The system of claim 61, wherein the control circuitry is directed to determine if on-demand media data needs to be retrieved from the on-demand media data source.
- 75. (Original) The system of claim 61, wherein the control circuitry is directed to determine whether a connection exists between the communications device and the on-demand media data source.

76. (Cancelled).

- 77. (Original) The system of claim 61, wherein the control circuitry is directed to retrieve on-demand media data from multiple on-demand media data sources using the communications device.
- 78. (Original) The system of claim 61, wherein the control circuitry is directed to cache on-demand media data from multiple on-demand media data sources in the cache memory.
- 79. (Original) The system of claim 61, wherein the control circuitry is directed to display non-on-demand media data and on-demand media data concurrently on the display device.
- 80. (New) The method of claim 1, wherein automatically establishing the client-server connection comprises automatically establishing a session with a server of the on-demand media data source.
- 81. (New) The computer-readable media of claim 21, the computer-readable media further encoded with computer-readable instructions for automatically establishing a session with a server of the on-demand media data source.
- 82. (New) The system of claim 41, wherein the means for automatically establishing the client-server connection comprises means for automatically establishing a session with a server of the on-demand media data source.

83. (New) The system of claim 61, wherein the control circuitry is directed to automatically establish a session with a server of the on-demand media data source.
